## Result of the decision

Result of the decision

Approval of the import and/or use of the LMO(s) with conditions

Conditions

- Fertile plant material has to be transported and stored in closed and clearly labelled repositories at any time outside the release site and laboratory and has to be kept separately from non transgenic plant material.
- All remaining fertile plant material has to be destroyed by disruption of their germination capacity.
- All machines that have been used on the release site have to be thoroughly cleaned on the release site.
- After harvest and in the spring of following year, the first 15 cm of upper soil of the release site have to be loosened up. Potato tubers that emerge during that procedure have to be manually collected, removed, and destroyed by disruption of their germination capacity.
- After the end of the field trial the release site must be inspected for transgenic volunteer potatoes at least once every four weeks. The inspection period has to be extended for another year if potato volunteers were observed.
- After the end of the field trial no plant species must be cultivated on the release site that impairs the detection of transgenic potato volunteers.

#### Reasons
